-:- TISSUE SPECIFICITY: DIGESTIVE GLAND.
-:- MASS SPECTROMETRY: MW=19702; METHOD-MALDI.
-:- MISCELLANEOUS: Has an isoelectric point of 7.6. Its optimum pH is 4.6 and optimum temperature is between 30-50 degress celsius.
-:- SIMILARITY: BELONGS TO CELLULASE FAMILY K (FAMILY 45 OF GLYCOSYL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TISSUE=Digestive gland;
